

ABSTRACT

Improved organophotoreceptor comprises an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive
5 element comprising:

(a) a charge transport material having the formula

where Y₁ and Y₂ comprise, each independently, a carbazolyl group;

X₁ and X₂, each independently, are a bridging group;

10 E₁ and E₂ comprise, each independently, an epoxy group; and

Z is a linking group; and

(b) a charge generating compound.

Organophotoreceptors with the charge transport material crosslinked to a
15 polymeric binder are also described. Corresponding electrophotographic apparatuses and imaging methods are described.
